POCKETBOT DESK CHEAT SHEET (v1 & APEX v2)

Keep Next to Keyboard | Default Mode: 100% Safe Fake-Money Demo (`DEMO LOCK ON`)

---

1. Daily 15-Second Pre-Flight Checklist (Do Before Clicking Any Button)

1. **Power & Sleep:** Plug laptop into wall power. Set **Windows Settings -> System -> Power & sleep -> Sleep** to **Never**.
2. **Open MetaTrader 5:** Confirm your Demo Balance appears in the bottom **Trade** tab (`Ctrl + T`). Use **`MetaQuotes-Demo`** or **Fusion Markets** (avoid Pocket Option `PoTrade-MT5`, which blocks bots).
3. **Green Bot Switch:** Check top MT5 toolbar -> **Algo Trading** button MUST show a **GREEN play icon** (if red, click once).
4. **Minimize MT5 (_):** Never click X on MetaTrader 5 while the bot is running. Always run from **`C:\PocketBot`** or **`C:\PocketBot_Apex`** (never directly off the USB stick).

---

2. Side-by-Side 1-Click Buttons (`C:\` Folder Launchers)

Task / Action	PocketBot v1 (`C:\PocketBot`)	PocketBot Apex v2 (`C:\PocketBot_Apex`)	What It Does
First-Time PC Setup	`1_FIRST_TIME_SETUP.bat`	`0_FIRST_TIME_SETUP.bat`	Run **ONCE** on a new PC. Installs Python 3.12, `.venv`, & checks MT5.
Connect cTrader	*Not included (MT5 only)*	`1_SETUP_CTRADER_KEYS.bat`	*Optional.* Links active cTrader app for Level 2 Order Book + Dual Routing.

Task / Action	PocketBot v1 (`C:\PocketBot`)	PocketBot Apex v2 (`C:\PocketBot_Apex`)	What It Does
Full Auto Demo	`START_AUTO_DEMO.bat` *(or 2_...)*	`2_START_APEX_AUTO_DEMO.bat`	**MAIN BUTTON:** Scans 10 markets every 5m & places Demo trades automatically.
Manual YES/NO	`START_CONFIRM_MODE.bat` *(or 3_...)*	`3_START_APEX_CONFIRM.bat`	Shows setup & $10,000$-replay odds, then waits for **`YES`** / **`NO`** + **Enter**.
Live Stats / Matrix	`CHECK_STATS.bat` *(or 4_...)*	`4_APEX_LIVE_DASHBOARD.bat`	Shows Balance, Daily P/L, Win Rate, Profit Factor (v2 adds Live Color Matrix).
Switch AI Brain	*Uses local Python math*	`5_CONFIGURE_AI_MODE.bat`	Pick priority: **AI Studio API <-> Google AI Pro <-> Pure Math** (`0` keys needed).
Switch Broker Mesh	*MT5 Single Engine*	`6_CONFIGURE_BROKER_MESH.bat`	Pick **Auto Hydra (MT5+cTrader)**, **cTrader Eyes + MT5 Hands**, or **50/50 Split**.

---

3. How to Stop Safely & Emergency Controls

- **Stop Scanning for New Trades:** Click **`X`** on the black PocketBot console window (or press **`Ctrl + C`**). Open trades stay protected because Stop-Loss (`S/L`) & Take-Profit (`T/P`) live on the broker's server.

- **Close an Open Trade Right Now:** Open MetaTrader 5 -> bottom **Trade** tab -> click the tiny **X** on the far right of that trade's row (or send **`/panic_flatten`** on Telegram in Apex v2 to close all trades from your phone).

---

4. Profit Math ($2\mathrm{R}$ Distance) & Built-In Safety Brakes

- **Zero Upfront Bet:** Unlike binary betting, your full $\$10,000$ stays in your balance. You win/lose by **pip distance**: Stop-Loss risks max 0.5% ($\$50$), while Take-Profit aims $2\times$ **farther** (1.0% = $+\$100$ pure profit).
- **Why 40% Wins Still Profit:** $6 \text{ losses} \times -\$50 = -\$300 and \$4 \text{ wins} \times +\$100 = +\$400 \implies \mathbf{+\$100}$ $\mathrm{Net\ Profit}$ over 10 trades.
- **Hard Circuit Breakers: (1)** Demo-Only Lock | **(2)** -2.0% Daily Loss Kill-Switch ($-\$200$ halts bot until tomorrow) | **(3)** Max 2 Open Trades (+ USD Correlation Shield in v2) | **(4)** Spread $\leq 15\%$ of Stop-Loss | **(5)** Mandatory Server-Side `S/L` & `T/P` | **(6)** Auto-Quarantine to `PAPER_SHADOW` if a symbol slumps (v2).

---

5. Apex v2 Live Dashboard Quick Decoder

Column	Good Signal	Meaning
Market Regime	`TRENDING_EXPANSION`	Hurst $H > 0.50$ = clean trend (`MEAN_REVERTING_CHOP` & `SHOCK` auto-block entries).
L2 DOM OBI	$\geq +0.15$ Buy / ≤ -0.15 Sell	Buyer vs. Seller order-book pressure (`N/A` when running MT5 solo without cTrader).
TM net_avg_R	Positive (e.g., `+0.25R`)	Average profit across $10,000$ replays **after** broker commissions & slippage.
Q-Kelly Risk	`0.10%` to `0.50%`	Auto-sized risk % for the trade (`0.00%` = filtered out / skipped).
Ledger State	`ACTIVE`	`PAPER_SHADOW` means Apex quarantined an underperforming symbol until it recovers.

---

6. PowerShell, agy AI Mechanic & 10-Second Troubleshooting

- **Manual PowerShell Start:** Press **Windows Key** -> type **`PowerShell`** -> paste `cd C:\PocketBot_Apex` (or `cd C:\PocketBot`) -> paste `.\.venv\Scripts\Activate.ps1`.
  - *Quick Commands:* **v1 Stats:** `python stats.py` | **v1 Dry-Run:** `python pocketbot_auto.py --mode demo-auto --once --dry-run` | **v2 Self-Tests:**

`python -m pytest tests/ -v` | **v2 Dashboard:** `python -m apex.cockpit.tui_dashboard`

- **Open AI Mechanic (agy):** Only needed to customize code/map new brokers. Run **agy** inside `.venv` -> sign in with Google -> type plain English at **>** -> exit with **`Ctrl + C` twice**.
- **Instant Fixes:**
  - **`Error 10026` (Server disabled):** Broker blocks bots -> in MT5 click **File -> Open an Account -> MetaQuotes Ltd. -> Demo**.
  - **`Error 10027` (Client disabled):** Click the red **Algo Trading** button on MT5's top toolbar so it turns **GREEN**.
  - **`cTrader Submitted`:** Normal 1-day Spotware review for new apps; keep running on MT5 until Status turns **Active**. *(Note: Fusion Markets live accounts exclude Ontario & Alberta).*
- **Golden Schedule & Graduation Rule:** Best hours = **8:00 AM - 12:00 PM New York Time (ET), Mon-Fri** (Forex/Stocks close Fri 5 PM - Sun 5 PM ET; only Crypto runs 24/7). Stay on **Demo** for ≥ 50 **closed trades** with **Profit Factor** ≥ 1.30 before ever risking real money.
